*FRIAA does not have responsibility for any openings harvested in L11 in the last 5 years. These openings were older cutblocks disturbed by fire in 2015 and 2016.

**These are mostly deciduous permits.

Current means openings will have at least one activity or survey to complete after April 30, 2020 (that means reforestation activities will be completed on some of the openings before a new agreement comes into effect). Area harvested last 5 years is an indication of more recent activity but no guarantee of future activity.

Allocated AAC as of April 11, 2017 reflects green area harvest volume allocated to the Community Timber Permit Program (CTPP) or small quota holders who currently pay reforestation levy. This may be an indication of further activity; however, it must be noted that actual harvest in many FMUs is lower than the AAC that is allocated. Cells with red font and yellow shading indicate allocated volumes in FMUs that has not been used by permit holders in the recent past.
